Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records ries and the Environment. F s name was introduced v

Da ally. Requests for individ on the front cover and tit commercial agents.

l s compilations de donn tions auront d'ordinaire sujets des rapports statis s du ministère des Pêch atiques.

l distribution et leur cont autorisation écrite préal ssus du résumé de chaq revue *Résumés des scien* annuel des publications

SUBREPORT 1

SUBREPORT 1

CATCH REGION: NTR

Data for the week ending March 8 (statistical week 031)

Totals for chinook captured in NTR during year. Ratios are computed from the total species catch and sample and are not weekly averages

	MRDB (031)	AP (044)	MV (045)		TOTALS
CHINOOK CATCH	50	11	1152	← A total of 1152 chinook landed during week 045.	159060
SAMPLE	--The catch was not randomly sampled for marks.	19	412	← A total of 412 chinook from the total catch were randomly sampled for marks	37060
MARKED	--No marked fish were recovered by random sampling.	1	12	← Of the 412 fish randomly sampled 12 adipose-only clipped fish were found.	1289
C/S	--No ratios can be calculated	*1.0	2.8	← For each fish examined for marks, 2.8 fish were captured in NTR. The ratio is rounded to 1 decimal although a higher degree of accuracy is used in expanding observed numbers of marks to estimated numbers.	4.3
S/C %		172.7	35.8	← 35.8% of the catch was randomly examined for marks.	23.3
S/M		19.0	34.3	← For every marked fish in the catch of 1152 chinook, there were an estimated 34.3 unmarked fish.	28.8

Asterisk denotes discrepancy between catch & sample. When the number sampled is greater than the catch, the C/S ratio is reported as 1.0 and marked with an asterisk. This number is used in the expansions of subreports 2 & 5

*** Asterisks separate catch regions
